

Week 11 Report: Dissertation Writing

Project: Determining the Role of Big Data Applications in Fraud Detection and Financial Security in Financial Institutions of Ireland

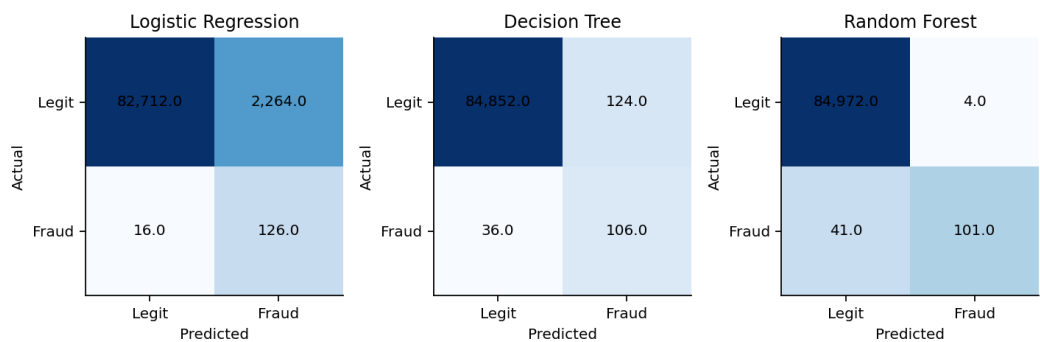

Student: Yashwanth

Supervisor: Dr. Prasanth Nayak

What I did this week

This week I completed the full draft. The evaluation chapter reports the main results, the imbalance comparison, the threshold analysis, the robustness checks and the explanations. The discussion answers each research question and gives recommendations for Irish financial institutions, linked to GDPR, PSD2 and the EU AI Act.

The main message is that Random Forest is the best choice, but the way a model is evaluated matters as much as the model itself. Default thresholds, resampling and duplicate rows can all change the conclusions.

Confusion matrices of the three models.

Next week

Proofread, check every number against the results files and prepare the final submission.
