

Week 12 Report: Final Submission

Project: Determining the Role of Big Data Applications in Fraud Detection and Financial Security in Financial Institutions of Ireland

Student: Yashwanth

Supervisor: Dr. Prasanth Nayak

What I did this week

This is my final submission. It contains the dissertation (dissertation.pdf), the code and the results files behind every table and figure. The whole experiment runs with one command, `python src/pipeline.py`, after downloading the dataset from Kaggle, and takes about six minutes.

Before submitting I checked every number in the dissertation against the results files and confirmed that every reference exists and was published in the last two years, apart from the standard method references.

File	Content
dissertation.pdf	Final dissertation
project/src/pipeline.py	Full experiment
project/results/	Tables and figures
project/README.md	How to reproduce
